Innovative eco-friendly concept

Reduced power consumption, less heat dissipation

Ideal for VoIP and gaming with intelligent data streaming

THINK GREEN

D-Link takes the lead in networking industry to release Green Ethernet technology with its new series of SOHO Gigabit switches. These environmentally-friendly devices decrease energy costs through the reduction of power consumption without sacrificing operational performance or functionality, providing benefits to both the ecosystem and Home/SOHO users. They are designed to help conserve energy, protect our environment from harmful substances, and reduce waste by using recyclable packaging.

CONSERVING ENERGY

- + Automatically powers down ports that have no link
- + Budgets power output for different Ethernet cable lengths
- + Complies with California's stringent CEC and Australia MEPS regulation requiring the use of more energy efficient power adapters.*

PROTECTING THE ENVIRONMENT

- + Complies with RoHS directive that restricts the use of certain hazardous materials.
- + Complies with WEEE (Waste Electrical and Electronic Equipment) directives that use recyclable packaging to help reduce waste that goes into the environment.

* For USA, Australia & Japan shipment only

GIGABIT

GIGABIT CONNECTION FOR HOME AND SOHO

Offers an economical way for the SOHO and small and medium business (SMB) to benefit from the increased bandwidth of Gigabit Ethernet. It provides 5 Gigabit ports for fast server deployment to meet increasing network load.

IEEE 802.1p QoS

- + Ensure time-sensitive data gets delivered efficiently, even during bursts of high data traffic
- + Ensures the optimal experience for gamers and others requiring separation of priority traffic.

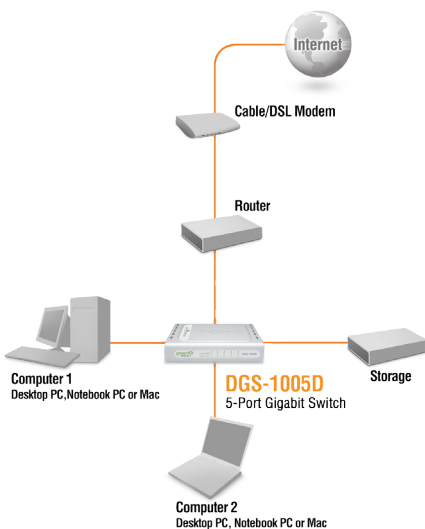

CABLE DIAGNOSTIC FUNCTION

With the continuing drive to Home/SOHO Gigabit adaptation, the D-Link Cable Diagnostic Function enables users to efficiently detect the cable condition, simply through seeing LED displayed on the front-panel.

- + Determine whether RJ-45 cables are Gigabit capable while migrating from existing networks using 4-wire CAT 3/5 RJ-45 cable to Gigabit-capable ones, minimizing the service calls or pain might have during the migration.

- + Show the result of detecting RJ-45 cable with an open circuit (a lack of continuity between the pins at each end of the Ethernet cable or a disconnected cable) or short circuit (two or more conductors short-circuited) or loop or link partner at 10/100Mbps.
